

The Science Island Express delivers the most recent big things happening at HFIPS.

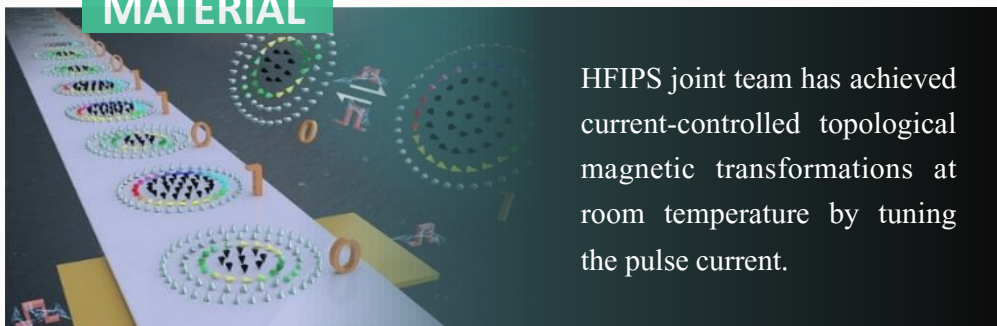

HFIPS researchers and their collaborators proposed an elegant mechanism that one circRNA, called circURI1, exerted an anti-metastatic effect through sequestering hnRNPM to modulate alternative splicing in Gastric cancer, making it the first reported association between circRNA and alternative splicing.

HFIPS puts HEALTH GUARD at your hand by developing a one-stop service of physical examination, risk evaluation of chronic diseases and guidelines for targeted exercise, which could be all done on smart health equipment placed in “Smart Health Station” within community reach.

MATERIAL

HFIPS joint team has achieved current-controlled topological magnetic transformations at room temperature by tuning the pulse current.
